Houston, TX

Dear Hiring Team,

Early in my career, I learned that the most complex technology challenges rarely come down to technology alone—they come down to people, processes, and vision. At ExxonMobil, I was entrusted to lead programs that touched tens of thousands of employees, from **leading global Azure DevOps and Cloud operations** to delivering a suite of application systems to power a **new global headquarters campus construction project**. Each project demanded not only technical acumen, but also the ability to bring diverse voices together, cut through complexity, and chart a path to breakthrough results. **ExxonMobil, a top company known for rigorous finance, engineering, and operations excellence, repeatedly chose me to lead some of their toughest IT challenges.**

I bring an effective mix of innovation, delivery execution, operations excellence, communications, strategy, and people leadership to organizations. One of my proudest moments was **rescuing a struggling \$30M enterprise portfolio management initiative**. Within just four weeks, I had aligned fractured architecture, data, and analytics strategies; rebuilt stakeholder confidence; and set the program on track to completion in a short seven months. Then, I rolled up my sleeves to both **MANAGE the data work and DO the analytics work**, designing and building most of the reports in Power BI myself, as a subject matter expert in portfolio management. **I also lean into innovation and emerging technologies, managing the development of a patented IoT sensor and ML software package capable of ultrasonic anomaly detection.** This solution promised a 30% reduction in unplanned oilfield downtime and accelerated adoption of cutting-edge technology that directly improved operational reliability – a predecessor of the digital twin revolution. Leading a portfolio management system implementation and a ground-up design/build of an IoT sensor/software suite share very little in common technically. But these back-to-back experiences **solidified my reputation as a transformational leader** who thrives in ambiguity, brings clarity where others see only obstacles, and is willing to do the work when necessary. I can dive deep, learn fast, and add value when making the hard decisions to keep critical efforts moving forward. Even my consulting partners one time quipped that I “**...should be out in Silicon Valley.**”

At the end of 2023, after two decades of delivering at the highest level, I made the intentional choice to take a professional break. This time gave me the space to recharge, reflect, and sharpen my perspective on the evolving technology landscape. I am now focused and eager to bring my proven ability to align IT with business strategy, drive digital transformation, and inspire greatness within your organization.

I’m excited to hear about your organization’s challenges, and I welcome the opportunity to discuss how my innovative curiosity, execution focus, strategic experience, and leadership touch can be a source of inspiration and value to you. Thanks for your time and consideration!

Sincerely,

Benjamin “Ben” Bohannon
